

Drug Quantity Limits- 2010

Quantity limits (QL) on medications are established to maximize the dosing regimen and decrease cost.

QLs are commonly placed on once daily drugs available in multiple strengths. The limit allows for titration to an effective dose, but requires long-term use with an appropriate strength of the medication. Taking medications less often (10mg once daily versus 5mg twice daily, if appropriate) increases compliance. If generics are added for BRAND drugs with QLs, the generic will have the same QL.
